

ABSTRACT OF THE DISCLOSURE

A multi-purpose kitchen pull-out faucet which has a handle connectable with a source of water, a faucet head attached to the handle and formed so that water can pass through the faucet head onto an object when the person holds the handle, and an additional scrubbing element which is operative for applying a scrubbing action which is different from a washing action of water, the additional scrubbing element being attached to the faucet head and formed so that when a person holds the handle in one hand, simultaneously the faucet head is held and the additional scrubbing element is held in one hand, and a person can therefore provide a flow of water from the faucet head onto an object and also an additional action by the additional scrubbing element to the object.
